Farming. Animal  
husbandry is the rearing  
of livestock, cattle, sheep,  
goats and donkeys by a  
farmer in order to sustain  
himself and his nation.

Sustainable management  
of the world's livestock  
genetic diversity is of vital  
importance to  
agriculture, food  
production, rural  
development and the  
environment. "The State  
of the World's Animal  
Genetic Resources for  
Food and Agriculture" is

the first global assessment  
of these resources.

Drawing on 169 Country

systems. Tools and methods to enhance the use and development of animal genetic resources are explored in sections on the state of the art in characterization, genetic improvement, economic evaluation and conservation. The main findings of the report are summarized in "The State of the World's Animal Genetic Resources for

present methodologies and proposals to develop policies that result in sustainable and profitable animal production that will protect human and environmental health, enhance livelihood of smallholders and meet consumer needs. The book combines lessons of the past, factual foundation to understand the present,

analytical tools to design and improve policies, case studies that provide both empirical grounding and applications of some of the strategies suggested in this book, and finally, a proposal for the way forward.

This book covers many of the recent research observations on the

management and use of working animals in tropical agricultural systems. Studies of oxen, donkeys and camels in sub-Saharan Africa, cows and donkeys in Ethiopia, buffaloes in Vietnam, camels in Libya and horses and donkeys in Southern Italy are some of the topics included. Technical issues in nutritional requirement,

feeding, management, health, implement, work practices and harnessing are discussed and the contribution that working animals continue to make in many agricultural and transport activities are quantified. The book is a valuable source of reference materials on draught animal technology. It is a must
