The global networking promoted by technology, globalization and migration that are occurring at a large scale, requires school systems that develop in the students new types of skills, based on the ability to understand the world and its problems and instill a sense of responsibility and cooperation to enhance the resolution of the great problems of mankind. Rethinking education is essential in a global, transcultural, changing and communicated world. Throughout the book Rethinking Education for a Global, Transcultural World is argued and analyzed how to build relationships between the school and society, and the possibilities of transcending the barriers in different national contexts: Chile, Israel, Mexico, Morocco, Poland, and Spain. The main goal we want to achieve with the contributions made in the book is to know how education systems and schools in different countries respond to the social changes caused by globalization, migration and new communication technologies. The authors are professors of different scientific disciplines and different faiths, cultures and points of view, living the realities described in the chapters and thinking from these realities how to improve and how should be the education in a

global, challenging and ever-changing world. We stress the importance of this book and its implications in the education of children and youth and in the preparation of teachers. For this reason, this is a book designed for teachers of primary and secondary schools, parents, principals, supervisors, university teachers who prepare school teachers, university students and those who want to know and think about education in a global and intercultural world and new forms of communication to face learning, whether at local or at world level. The mission of all is continue building education, and to facilitate this work in this book are presented contributions and recommendations of professionals around the world that will allow the reader to know, analyze, understand and appreciate the importance of education to prepare students to function with open and critical thinking in a global world. The chapters do not offer a panacea, but offer many ideas on how, through education, prepare citizens for a global and transcultural society.

The Allegory of the Cave, or Plato's Cave, was presented by the Greek philosopher Plato in his work Republic (514a–520a) to compare "the effect of education (???????) and the lack of it on our nature". It is written as a dialogue between Plato's brother Glaucon and his mentor Socrates, narrated by the latter. The allegory is presented after the analogy of the sun (508b–509c) and the analogy of the divided line (509d–511e). All three are characterized in relation to dialectic at the end of Books VII and VIII (531d–534e). Plato has Socrates describe a group of people who have lived chained to the wall of a cave all of their lives, facing a blank wall. The people watch shadows projected on the wall from objects passing in front of a fire behind them, and give names to these shadows. The shadows are the prisoners' reality.

Physical education can no longer be treated as separate entity. Physical education cannot be separated from educational process. It is therefore said to be an integral part of total process of education. The book is based on the revised syllabus B.P.Ed and is written to provide information and educate students about the physical education, historical developments in different era, foundation and principles of physical education. The language of the book is very simple and easy to understand.

This scholarly volume proposes protreptic as a radically new way of reading Plato's dialogues leading to enhanced student engagement in learning and inquiry. Through analysis of Platonic dialogues including Crito, Euthyphro, Meno, and Republic, the text highlights Socrates' ways of fostering and encouraging self-examination and conscionable reflection. By focusing his work on Socrates' use of protreptic, Marshall proposes a practical approach to reading Plato, illustrating how his writings can be used to enhance intrinsic motivation amongst students, and help them develop the thinking skills required for democratic and civic engagement. This engaging volume will be of interest to doctoral students, researchers, and scholars concerned with Plato's dialogues, the philosophy of education, and ancient philosophy more broadly, as well as post-graduate students interested in moral and values education research.

A mysterious and tremendous thing comes to reveal itself in the course of the lifetime of an earthly human. So mysteriously confronted by it, the earthly human becomes awed by this compelling human attribute. The earthly human becomes so enraptured by it that he begins to consider it as a quality that defines and explains his human nature. The earthly human desires to know; the earthly human desires to understand that which his physical body sense experiences of earthly reality. The earthly human holds so much psychological and intellectual desire toward knowing it that he gives it a name. How does the earthly human discover truth?

An examination of the material culture outlined in Plato's Laws including demographic, economic, military and political structures, analysed using contemporary theories and historical contextualization
