Citrus Fruits

Citrus medica: Clementine: Citrus reticulata: Corsican citron: Citrus medica: Desert lime: Citrus glauca: Found in lowland subtropical rainforest and dry rainforest areas of Queensland and New South Wales, Australia. Early settlers consumed the fruit and retained the trees when clearing for agriculture.

List of citrus fruits - Wikipedia

Citrus fruits are edible fruits that belong to the genus Citrus, and family Rutaceae. The pulp of these fruits is juicy. These fruits are either eaten by simply peeling off the skin, or are squeezed to make juice. In early times, countries in the Mediterranean region were leading producers of these fruits.

### 21 Amazing Benefits Of Citrus Fruits For Skin, Hair, And ...

A citrus fruit is actually a special kind of berry grown on large shrubs that resemble trees. Types of citrus include oranges, lemons, and limes, and are generally more bitter or sour in taste than an apple. It is protected on the outside by a peel and a juicy pulp covered with a white pith.

World production of citrus fruits continues an upward trend. Total world citrus production in 1961 amounted to about 24 MMT (69% oranges, 11 % tangerines, 11% lemons and limes, and 9% grapefruit) and is projected in 1990 at about 71 MMT (69% oranges, 14% tangerines, 10% lemons and limes, and 7% grape fruit). More than 125 countries and territories produce some type of citrus fruit; however, nearly 70% of the world total (54 MMT) in 1983 was accounted for by the ten largest producers, viz., United States (22.2%), Brazil (18.6%), Japan (6.6%), Spain (5.5%), Italy (4.8%), Mexico (4.0%), Argentina (2.8%), Israel (2.6%), Turkey (2.6%), and Egypt (1.8%). In 1983, about 60% of world citrus production was consumed in fresh form. During the 1960s and 1970s, fresh consumption increased at an average rate of about 4% per year; however, projections for the 1980s and 1990s show an annual average rate of only 2%. Countries differ in the utilization of their citrus crop. As an example, Mediterranean Basin countries use 80% of their production in fresh form, whereas the two largest citrus producers, the United States and Brazil, use less than 40% of their production in fresh form. The Mediterranean Basin countries are also the largest exporters of fresh citrus, accounting for about 75% of the world total. The major fresh citrus fruits exported in 1981 were oranges, (58%), tangerines (15%), lemons and limes (15%), and grapefruit (12%).

Post harvest biology and technology of citrus fruits is gaining importance as the therapeutic value of citrus fruits is realized and supported by the increase in health awareness among the general public. This book is the most comprehensive reference on citrus fruit biology, biotechnology and quality. Basic and applied scientific information is interwoven to serve the researcher, marketer, scientist, nutritionist, or dietician. With discussions of fruit morphology, anatomy, physiology and biochemistry and chapters on growth phases, maturity standards, grades and physical and mechanical characteristics of citrus trees, this book provides the foundation for understanding growth, harvest and post harvest aspects of these important plants. Insect-pests and diseases, irrigation, nutrition and rootstocks are also addressed. \* Provides practical tips for post harvest management. \* Includes all aspects of citrus fruit biology, technology and quality evaluation. \* Discusses biotechnological applications and potential fresh citrus fruit quality improvement \* Evaluates medicinal and therapeutic applications and recent clinical findings \* Exhaustive glossary included

Citrus Fruit Processing offers a thorough examination of citrus—from its physiology and production to its processing, including packaging and by-product processing. Beginning with foundational information on agricultural practices, biology, and harvesting, Citrus Fruit Processing goes on to describe processing in the context of single-strength juices, concentrated juices, preserves, and nutrition. New technologies are constantly emerging in food processing, and citrus processing is no different. This book provides researchers with much-needed information on these technologies, including state-of-the-art methodologies, all in one volume. Offers completely up-to-date coverage of scientific research on citrus and processing technology Explores all aspects of citrus and its processing, including biochemistry, technology, and health Provides an easy-to-follow organization that

## Access Free Citrus Fruits

highlights the many aspects of citrus processing, including agricultural practices, juice processing, byproducts, and safety Describes processing in the context of single-strength juices, concentrated juices, preserves, and nutrition

This early work on citrus fruit cultivation is both expensive and hard to find in its first edition. It contains information on planting, diseases, insect control and much more. This is a fascinating work and is thoroughly recommended for the amateur fruit grower. Many of the earliest books, particularly those dating back to the 1900s and before, are now extremely scarce. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

Illustrations and text describe how to grow 50 varieties of citrus and 16 exotic fruits, with tips on indoor cultivation.

Citrus is the main fruit tree crop in the world and, therefore, has a tremendous economical, social and cultural impact in our society. Citrus fruits provide a wide variety of important nutrients in the human diet; including Vitamin C, flavonoids, phenolic compounds, carotenoids, folic acid, pectin, potassium, and dietary fibre. This book presents current research data in the study of citrus fruits, including such topics as the post-harvest preservation of fresh citrus fruits; citrus fruits and metabolic syndrome; the control of citrus cracking or pitting; the chemical composition, general uses and pharmacological properties of *Citrus aurantium* (bitter orange) and the robotic harvesting of citrus fruit.
