After years of extensive study, most historians believe that the Valley of the Kings was used as a royal burial ground from approximately 1539 to 1075 B.C.—a period of almost 500 years. The first tomb to be carved here was that of the pharaoh Thutmose I, while the last royal tomb is thought to be that of Ramesses XI. It is uncertain why Thutmose I chose the valley as the site of his new necropolis.

Nicholas Reeves’s radical interpretation of a revolutionary king—now available in paperback. One of the most compelling and controversial figures in ancient Egyptian history, Akhenaten has captured the imagination like no other Egyptian pharaoh. Much has been written about this strange, persecuted figure, whose depiction in effigies is totally at odds with the traditional depiction of the Egyptian ruler-hero. Akhenaten sought to impose upon Egypt and its people the worship of a single god—the sun god—and in so doing changed the country in every way. In Akhenaten, Nicholas Reeves presents an entirely new perspective on the turbulent events of Akhenaten’s seventeen-year reign. Reeves argues that, far from being the idealistic founder of a new faith, the Egyptian ruler cynically used religion for political gain in a calculated attempt to reassert the authority of the king and concentrate all power in his hands. Backed by abundant archaeological and documentary evidence, Reeves’s narrative also provides many new insights into questions that have baffled scholars for generations—the puzzle of the body in Tomb 55 in the Valley of the Kings; the fate of Nefertiti, Akhenaten’s beautiful wife; the identity of his mysterious successor, Smenkhkare; and the theory that Tutankhamun, Akhenaten’s son and heir to the throne, was murdered.

From early towns to booming metropolises, The Complete Cities of Ancient Egypt explores every facet of urban life in ancient Egypt with a leading authority in the field as a guide Ancient Egyptian cities and towns have until recently been one of the least-studied and least-published aspects of this great ancient civilization. Now, new research and excavation are transforming our knowledge. This is the first book to bring these latest discoveries to a wide audience and to provide a comprehensive overview of what we know about ancient settlement during the dynastic period. The cities range in date from early urban centers to large metropolises. From houses to palaces to temples, the different parts of Egyptian cities and towns are examined in detail, giving a clear picture of the urban world. The inhabitants, from servants to Pharaoh, are vividly brought to life, placed in the context of the civil administration that organized every detail of their lives. Famous cities with extraordinary buildings and fascinating histories are also examined here through detailed individual treatments, including: Memphis, home of the pyramid–building kings of the Old Kingdom; Thebes, containing the greatest concentration of monumental buildings from the ancient world; and Amarna, intimately associated with the pharaoh Akhenaten. An analysis of information from modern excavations and ancient texts recreates vibrant ancient communities, providing range and depth beyond any other publication on the subject.

This book examines the interplay between astronomy and dynastic power in the course of ancient Egyptian history, focusing on the fundamental role of astronomy in the creation of the pyramids and the monumental temple and burial complexes. Bringing to bear the analytical tools of archaeoastronomy, a set of techniques and methods that enable modern scholars to better understand the thought, religion and science of early civilizations, Giulio Magli provides in-depth analyses of the pyramid complexes at Giza, Abusir, Saqqara and Dahshur, as well as of the Early Dynastic necropolis at Abydos and the magnificent new Kingdom Theban temples. Using a variety of data retrieved from study of the sky and measurements of the buildings, he reconstructs the visual, symbolic and spiritual world of the ancient Egyptians and thereby establishes an intimate relationship among celestial cycles, topography and architecture. He also shows how they were deployed in the ideology of the pharaoh's power in the course of Egyptian history.
