A consummate classic with a fresh approach to pediatric dermatology Children's skin is different. Maturation affects the epidermal barrier, the cutaneous microbiome, adnexal structures, vasculature, and transcutaneous absorption of drugs. The immature skin is more susceptible to pathogens and environmental disruption. Many genetic disorders are either present at birth or manifest early in childhood. Skin diseases thus present differently in children than in adults. Pediatric dermatology has seen significant advances over the last decade, particularly in the field of molecular genetics research, which has furthered our understanding of the pathogenesis of many skin diseases and the development of new approaches to treatment. This fourth edition of the Harper classic provides state-of-the-art information on all aspects of

skin disease in children. It covers the diagnosis and treatment of all conditions - both common and rare - with a consistently evidence-based approach. Existing content has been refreshed and fully updated to reflect emerging thinking and to incorporate the latest in research and clinical data - especially at the genetic level. This new fourth edition includes:

- Greater focus on the genetics behind skin disease, including new genes/genodermatoses, progress in genetic analysis, and stem cell transplants
- Increased coverage of lasers and other technologies used to treat skin disease
- More summary tables, learning points, tables of differential diagnosis, and clinical algorithms for diagnosis and management
- Additional online features, including patient information links and multiple choice questions

This book represents 25 years of clinical experience. In it, Dr. Provo st and his expert contributors correlate dermatology and internal medicine by describing the dermatologic manifestations of systemic disease, from rheumatoid arthritis to Raynaud's disease to periocarditis. Each chapter is co-authored by a dermatologist and a medical specialist. Topics covered include the cutaneous manifestations of connective tissue diseases; nonimmunologic arthritides; immune and complement deficiencies; malignancies;

It is a pleasure to introduce this new book, *Clinical and Pathological Aspects of Skin Diseases in Endocrine, Metabolic, Nutritional, and Deposition Disease*, edited by two of my friends and respected colleagues, Franco Rongioletti and Bruce R. As a dermatopathologist, I am also pleased that this project has been organized and undertaken by two distinguished authorities in cutaneous pathology. This assures a close integration of histology and other laboratory techniques with the clinical aspects of these disorders, which will make it possible – perhaps for the first time – to view these conditions in a truly comprehensive way.
