What are the various atmospheres or moods that the reading of literary works can trigger? Hans Ulrich Gumbrecht has long argued that the function of literature is not so much to describe, or to re-present, as to make present. Here, he goes one step further, exploring the substance and reality of language as a material component of the world—impalpable hints, tones, and airs that, as much as they may be elusive, are no less matters of actual fact. Reading, we discover, is an experiencing of specific moods and atmospheres, or Stimmung. These moods are on a continuum akin to a musical scale. They present themselves as

nuances that challenge our powers of discernment and description, as well as language's potential to capture them. Perhaps the best we can do is to point in their direction. Conveying personal encounters with poetry, song, painting, and the novel, this book thus gestures toward the intangible and in the process, constitutes a bold defense of the subjective experience of the arts.

This book details the design and technology of the on-line electric vehicle (OLEV) system and its enabling wireless power-transfer technology, the "shaped magnetic field in resonance" (SMFIR). The text shows how OLEV systems can achieve their three linked important goals: reduction of CO₂ produced by ground transportation; improved energy efficiency of ground transportation; and contribution to the amelioration or prevention of climate change and global warming. SMFIR provides power to the OLEV by wireless transmission from underground cables using an alternating magnetic field and the reader learns how this is done. This cable network will in future be part of any local smart grid for energy supply and use thereby exploiting local and renewable energy generation to further its aims. In addition to the technical details involved with design and realization of a fleet of vehicles combined with extensive subsurface charging infrastructure, practical issues such as those involved with pedestrian safety are considered. Furthermore, the benefits of reductions in harmful emissions without recourse to large banks of batteries are made apparent. Importantly, the use of Professor Suh's axiomatic design paradigm enables such a complicated transportation system to be developed at reasonable cost and delivered on time. The book covers both the detailed design and the relevant systems-engineering knowledge and draws on experience gained in the successful implementation of OLEV systems in four Korean cities. The introduction to axiomatic design and the in-depth discussion of system and technology development provided by The On-line Electric Vehicle is instructive to graduate students in electrical, mechanical and transportation engineering and will help engineers and designers to master the efficient, timely and to-cost implementation of large-scale networked systems. Managers responsible for the running of large transportation infrastructure projects and concerned with technology management more generally will also find much to interest them in this book.

Use the Latest Tools and Techniques to Troubleshoot and Repair Major Appliances, Microwaves, and Room Air Conditioners! Now covering both gas and electric appliances, the updated second edition of Troubleshooting and Repairing Major Appliances offers you a complete guide to the latest tools, techniques, and parts for troubleshooting and repairing any appliance. Packed with over 200 illustrations, the book includes step-by-step procedures for testing and replacing parts... instructions for reading wiring diagrams... charts with troubleshooting solutions... advice on using tools and test meters... safety techniques... and more. The second edition of Troubleshooting and Repairing Major Appliances features: Expert coverage of major appliances Cutting-edge guidance on appliance operation, testing and repairing, wiring, preventive maintenance, and tools and test meters New to this edition: information on both gas and electric appliances; 10 entirely new chapters; new illustrations throughout

Inside This Updated Troubleshooting and Repair Manual • Fundamentals of Service: Selection, Purchase, and Installation of Appliances and Air Conditioners • Safety Precautions • Tools for Installation and Repair • Basic Techniques • Fundamentals of Electric, Electronic, and Gas Appliances, and Room Air Conditioners: Electricity • Electronics • Gas • Principles of Air Conditioning and Refrigeration • Electric, Electronic, and Gas Appliance Parts • Appliance Service, Installation, and Preventive Maintenance Procedures: Dishwashers • Garbage Disposers • Electric and Gas Water Heaters • Washers • Electric and Gas Dryers •

Using an extremely clear and informal approach, this book introduces readers to a rigorous understanding of mathematical analysis and presents challenging math concepts as clearly as possible. The real number system. Differential calculus of functions of one variable. Riemann integral functions of one variable. Integral calculus of real-valued functions. Metric Spaces. For those who want to gain an understanding of mathematical analysis and challenging mathematical concepts.

This book covers the same material and more when compared with other international business texts, yet it is priced for the student's pocketbook. A new international business text for a new and ever changing global environment. With a unique chapter covering International E-Commerce, Cullen is written in a unique way. Issues link the chapters. The logic is that to choose and implement strategies in international business, you need to understand the global, institutional, and cultural environment. In turn, you need to align functional strategies to support the more general multinational strategies. From the student's point of view, the approach is designed to answer the questions of "why do I really need to know all of this stuff?" Log on to International Business' companion website for student and instructor resources, featuring Lecture Notes, Lecture Slides, a TestBank, Practice Quizzes, Flash Cards, and useful links: www.cullenib.com.

This book is intended as a textbook that presents a modern approach to radiation dosimetry, covering the principles and applications of microdosimetry in radiation dosimetry, radiation protection, radiation biophysics and radiotherapy. It is designed to be used in medical and radiation physics courses and by Master and PhD students in medical radiation physics. Designed to be academic as well as practical, it is the first book of its kind suitable for both teaching and researching various radiation dosimetry topics.

For undergraduate Operations Management courses. A broad, practical introduction to operations, reinforced with an extensive collection of practice problems. Operations Management presents a broad introduction to the field of operations in a realistic and practical manner, while offering the largest and most diverse collection of problems on the market. The problems found in this text also contain ample support--found in the book's solved-problems, worked examples, and myomlab, Pearson's new online homework and tutorial system--to help students complete and understand assignments even when they're not in class. Note: This is the standalone book, if you want the book/access card order the ISBN below: 0133130762 / 9780133130768 Operations Management Plus NEW MyOmLab with Pearson eText -- Access Card Package Package consists of: 013292062X / 9780132920629 NEW MyOMLab with Pearson eText -- Access Card -- for Operations Management 0132921146 / 9780132921145 Operations Management
