Originally published in 1957, New Developments in Analytical Psychology built on the work of C.G. Jung. Jung's researches into the unconscious had led him to study the history of religion and the hitherto little understood psychology of alchemy; they had directed him away from child psychology and also, in later years, away from clinical analysis as well. Nonetheless his discoveries and theories have essential relevance in both these spheres. All the papers in this volume complement and amplify Jung's work. The author made a special study of child analysis and ego development and here publishes his conclusions in a series of papers. The studies of children led to developments in analytic techniques which are worked out in a longer essay on the transference, to the understanding of which analytical psychology has a unique contribution; they have also stimulated a reassessment of the relation between the concept of archetypes and modern theories of heredity, instinct, neuro-physiology, and evolution, in which there had been much misunderstanding at the time. Michael Fordham was the last of the founders of a movement in psychoanalysis, and pioneered the Jungian analysis of children. This significant, early work can now be read and enjoyed in its historical context.

The Jungian approach to analysis and psychotherapy has been undergoing an extensive reconsideration during the past decade. Analytical Psychology calls special attention to the areas that have been most impacted: the core concepts and practices of the Jungian tradition, along with relevant intellectual and historical background. Internationally renowned authors drawing on the forefront of advance in neuroscience, evolution, psychoanalysis, and philosophical and historical studies, provide an overview of the most important aspects of these developments. Beginning with a chronicle of the history of the Jungian movement, areas covered include: * a background to the notion of 'archetype' * human development from a Jungian perspective * the creative extension of Jung's theory of psychological types * re-evaluation of traditional Jungian methods of treatment in the light of contemporary scientific findings * Jungian development of transference and countertransference * a new formulation of synchronicity. Analytical Psychology presents a unique opportunity to witness a school of psychotherapy going through a renaissance. Drawing on original insights from its founder, C.G. Jung, this book helps focus and shape the current state of analytical psychology and point to areas for future exploration.

Originally published in 1957, New Developments in Analytical Psychology built on the work of C.G. Jung. Michael Fordham was the last of the founders of a movement in psychoanalysis, and pioneered the Jungian analysis of children. This significant, early work can now be read and enjoyed in its historical context.

Tavistock Press was established as a co-operative venture between the Tavistock Institute and Routledge & Kegan Paul (RKP) in the 1950s to produce a series of major contributions across the social sciences. This volume is part of a 2001 reissue of a selection of those important works which have since gone out of print, or are difficult to locate. Published by Routledge, 112 volumes in total are being brought together under the name The International Behavioural and Social Sciences Library: Classics from the Tavistock Press. Reproduced here in facsimile, this volume was originally published in 1961 and is available individually. The collection is also available in a number of themed mini-sets of between 5 and 13 volumes, or as a complete collection.

Research in Analytical Psychology: Applications from Scientific, Historical, and Cross-Cultural Research is a unique collection of chapters from an international selection of contributors, reflecting the contemporary field of research in Analytical Psychology with a focus on qualitative and mixed-methods research. Presented in seven parts, this volume offers unique qualitative research that highlights approaches to understanding the psyche and investigating its components, and offers a Jungian perspective on cultural forces affecting individual psychology. The book brings forward the connections between Analytical Psychology and other disciplines including neuroscience, psychotherapy research, developmental research, Freudian psychoanalysis, and cultural studies. Part I provides an introduction to the volume, establishes the nature of qualitative and interdisciplinary research and its applications for research in other fields, and outlines the presented work. Part II, Approaching Qualitative Research in Analytical Psychology, examines postmodernism and the value a Jungian perspective offers, and introduces Jung's correspondence as an emerging resource. Part III, Research on Symbolic Aspects of the Psyche, looks at archetypal theory and cultural complex theory. Part IV, Research on Consciousness and Emotion, presents chapters on meditation and the spectrums of emotion in mythologies, philosophy, Analytical Psychology, and the neurosciences. Part V, A Complex Systems Approach to the Psyche, addresses research on synchronicity, the geometry of individuation, and complexity, ecology, and symbolism. Part VI, Cross-Cultural Research, contains chapters concerning transcendence, psychosocial transformation, psychological infrastructure, and cultural complexes and cultural identity. Part VII concludes the volume by setting directions for potential areas of future study and collaboration. Each chapter provides an overview of research in a specific area and closes with potential directions for future investigation. The book will enable practitioners and researchers to evaluate the empirical status of their concepts and methods and, where possible, set new directions. It also presents the significance of contemporary Analytical Psychology and offers opportunities for cross-discipline collaboration and fertilization. This book will be essential reading for analytical psychologists in practice and in training, academics and students of Analytical Psychology and post-Jungian ideas, and academics and students of other disciplines seeking to integrate methods from Analytical Psychology into their research. It is complemented by its companion volume, Research in Analytical Psychology: Empirical Research.

This is a book of two parts: the first focuses on theoretical concepts with special reference to the structure of the psyche, while the second includes more clinical material. Both exemplify the London Society's interest in childhood and the development of ideas about the use of reductive analysis within the Jungian framework.

C. G. Jung and Erich Neumann first met in 1933, at a seminar Jung was conducting in Berlin. Jung was fifty-seven years old and internationally acclaimed for his own brand of psychotherapy. Neumann, twenty-eight, had just finished his studies in medicine. The two men struck up a correspondence that would continue until Neumann's death in 1960. A lifelong Zionist, Neumann fled Nazi Germany with his family and settled in Palestine in 1934, where he would become the founding father of analytical psychology in the future state of Israel. Presented here in English for the first time are letters that provide a rare look at the development of Jung's psychological theories from the 1930s onward as well as the emerging self-confidence of another towering twentieth-century intellectual who was often described as Jung's most talented student. Neumann was one of the few correspondence partners of Jung's who was able to challenge him intellectually and personally. These letters shed light on not only Jung's political attitude toward Nazi Germany, his alleged anti-Semitism, and his psychological theory of fascism, but also his understanding of Jewish psychology and mysticism. They affirm Neumann's importance as a leading psychologist of his time and paint a fascinating picture of the psychological impact of immigration on the German Jewish intellectuals who settled in Palestine and helped to create the state of Israel. Featuring Martin Liebscher's authoritative introduction and annotations, this volume documents one of the most important intellectual relationships in the history of analytical psychology.

A friend of Jung and Winnicott, Michael Fordham was co-editor of the collected works of Jung and the first editor of the Journal of Anaylytical Psychology. Freud, Jung, Klein - The Fenceless Field draws together his key writings on the relationship between psychoanalysis and analytical psychology.

The Jungian approach to analysis and psychotherapy has been undergoing an extensive reconsideration during the past decade. Analytical Psychology calls special attention to the areas that have been most impacted: the core concepts and practices of the Jungian tradition, along with relevant intellectual and historical background. Internationally renowned authors drawing on the forefront of advance in neuroscience, evolution, psychoanalysis, and philosophical and historical studies, provide an overview of the most important aspects of these developments. Beginning with a chronicle of the history of the Jungian movement, areas covered include: * a background to the notion of 'archetype' * human development from a Jungian perspective * the creative extension of Jung's theory of psychological types * re-evaluation of traditional Jungian methods of treatment in the light of contemporary scientific findings * Jungian development of transference

and countertransference * a new formulation of synchronicity. Analytical Psychology presents a unique opportunity to witness a school of psychotherapy going through a renaissance. Drawing on original insights from its founder, C.G. Jung, this book helps focus and shape the current state of analytical psychology and point to areas for future exploration.
